What is SOA Anyways?

Service-oriented architecture (SOA) is a software design and software architecture design pattern based on distinct pieces of software providing application functionality as services to other applications.

What is not SOA?

Web Services (alone)

RPC

"Services" that aren't shared

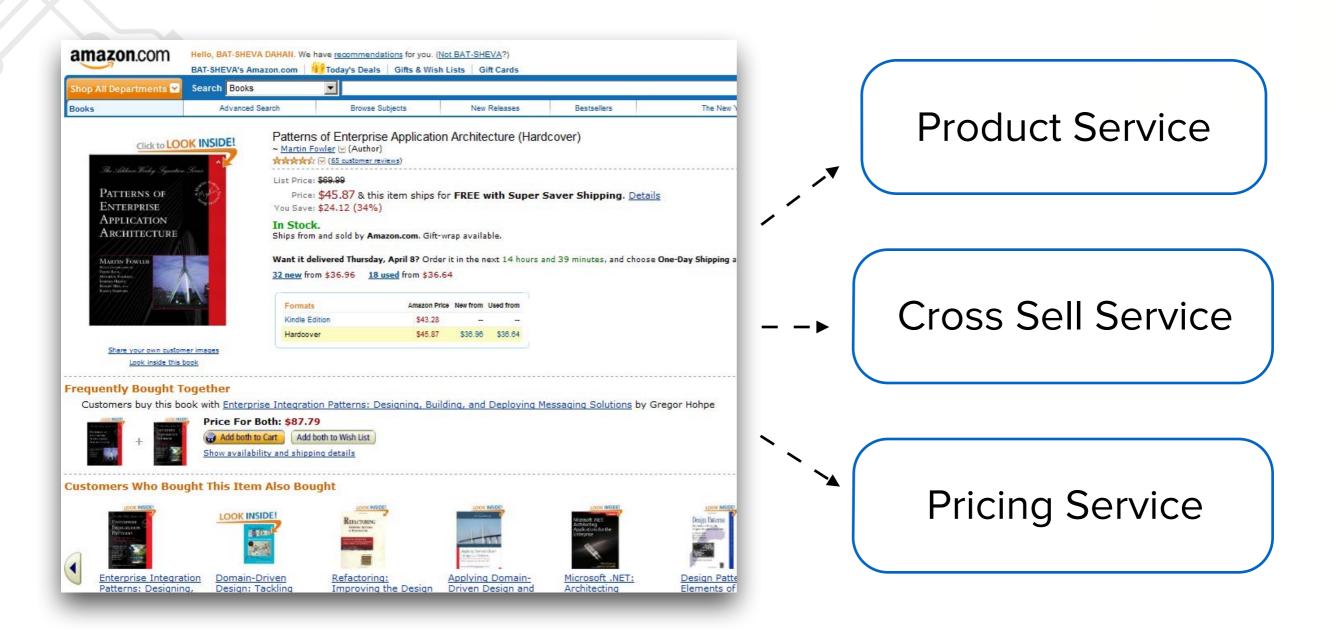

Systems are not Applications

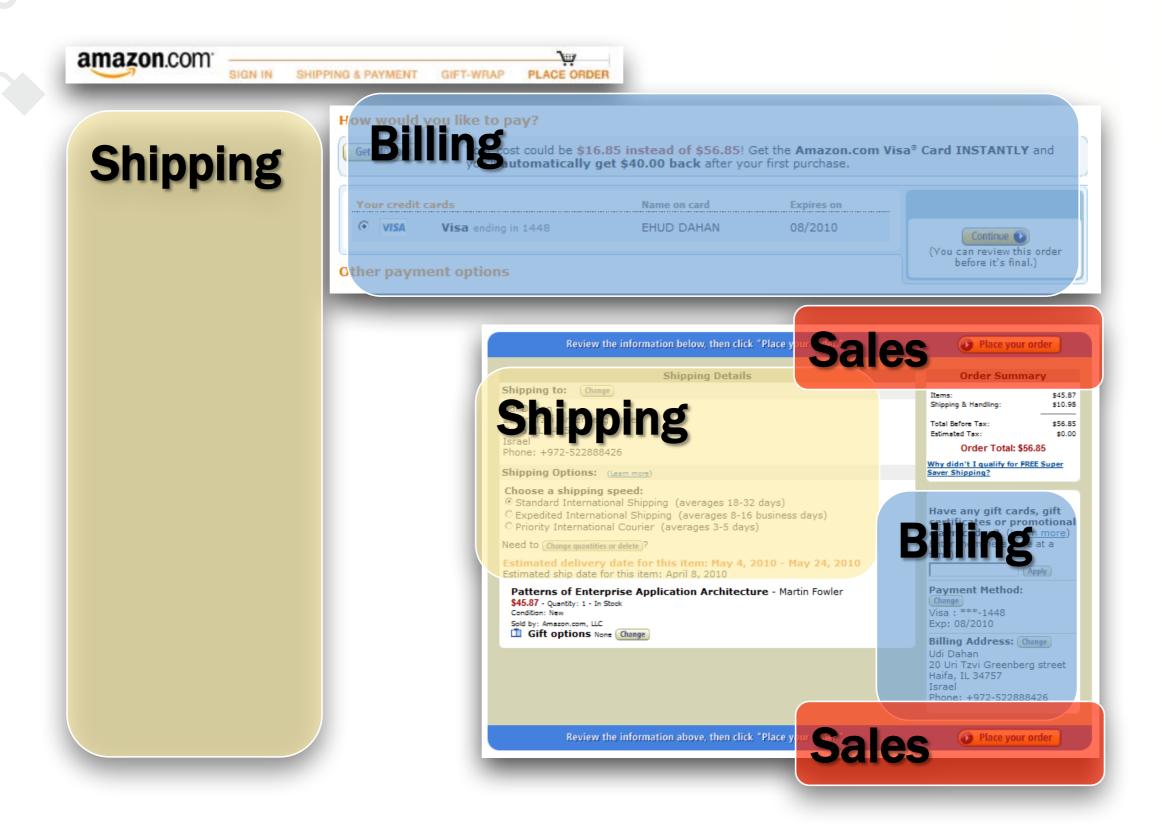

Systems are not Applications

Systems are not Applications

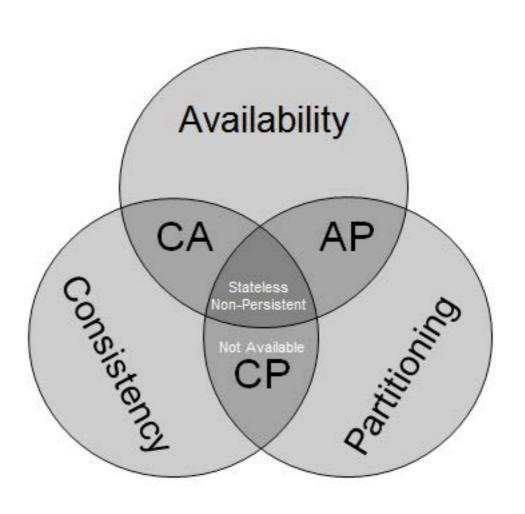

The Fallacies

- The network is reliable.
- Latency is zero.
- Bandwidth is infinite.
- The network is secure.
- Topology doesn't change.
- There is one administrator.
- Transport cost is zero.
- The network is homogeneous.

CAP Theorem

First mentioned by Eric Brewer in 2000 and was proven 2 years later.

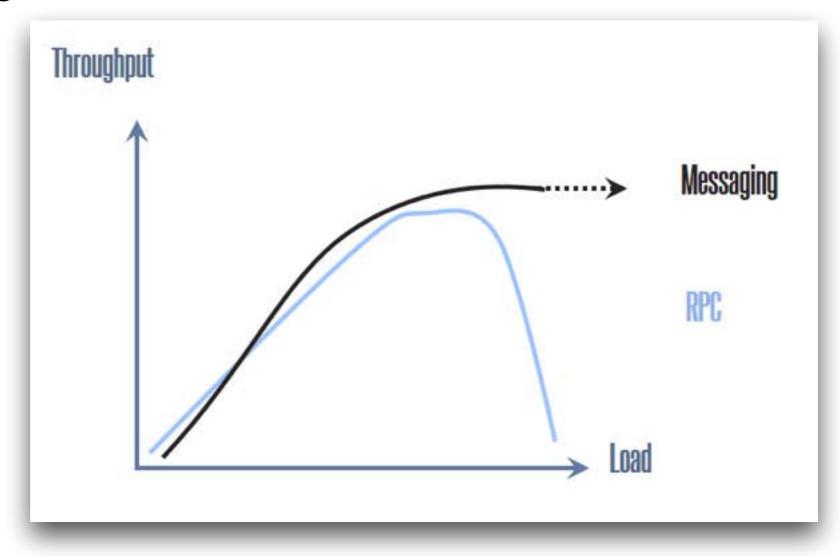

Messaging

Reduced Coupling

Store and Forward

Asynchronous

Fire-and-Forget

Event Driven Architecture

The other side of the SOA coin Events in EDA, not commands Informational Complex Event Processing

What is NServiceBus?

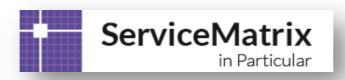

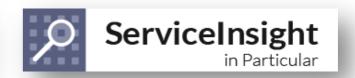

Overview

Developed by Udi Dahan, 2006 Grew out of work in the Aerospace sector Intended to make messaging easier, durable Commands & Events as first class citizens

Reliability

Scalability

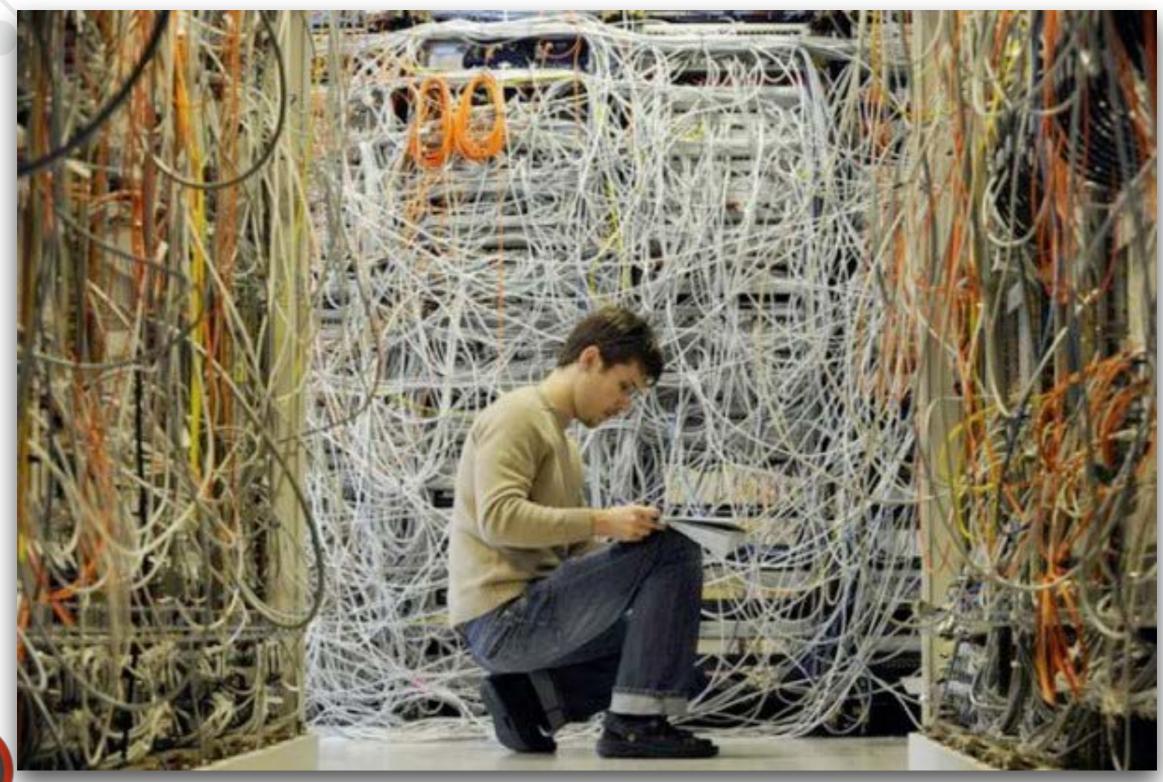

Extensibility

Maintainability

Who Uses this Thing?

Let's Build Something

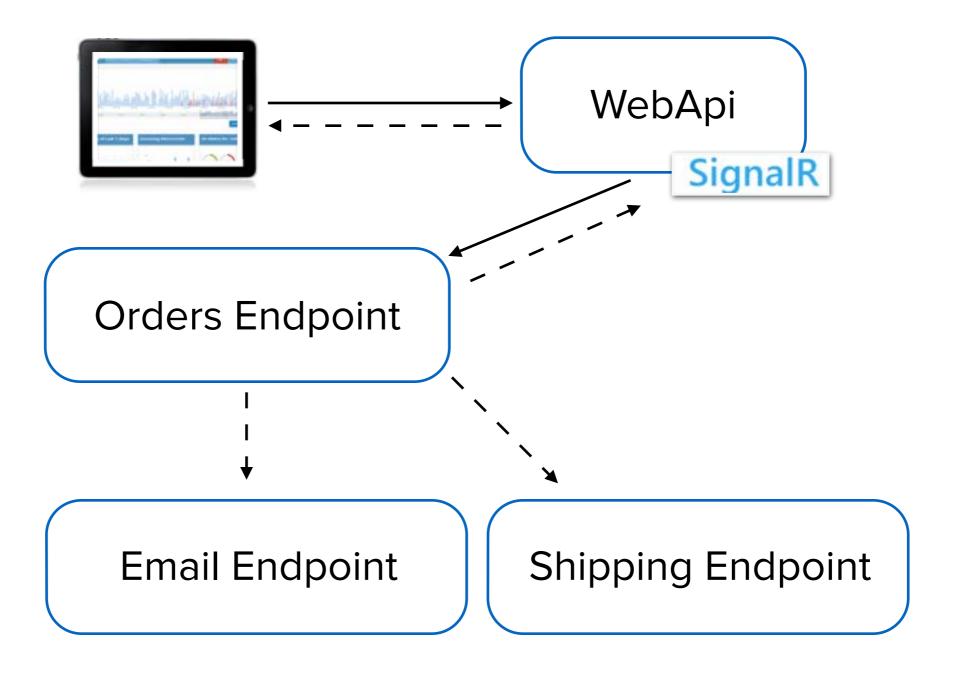

Demo System

eCommerce site

- Take an Order online
- Schedule Shipping for Order
- Send confirmation email

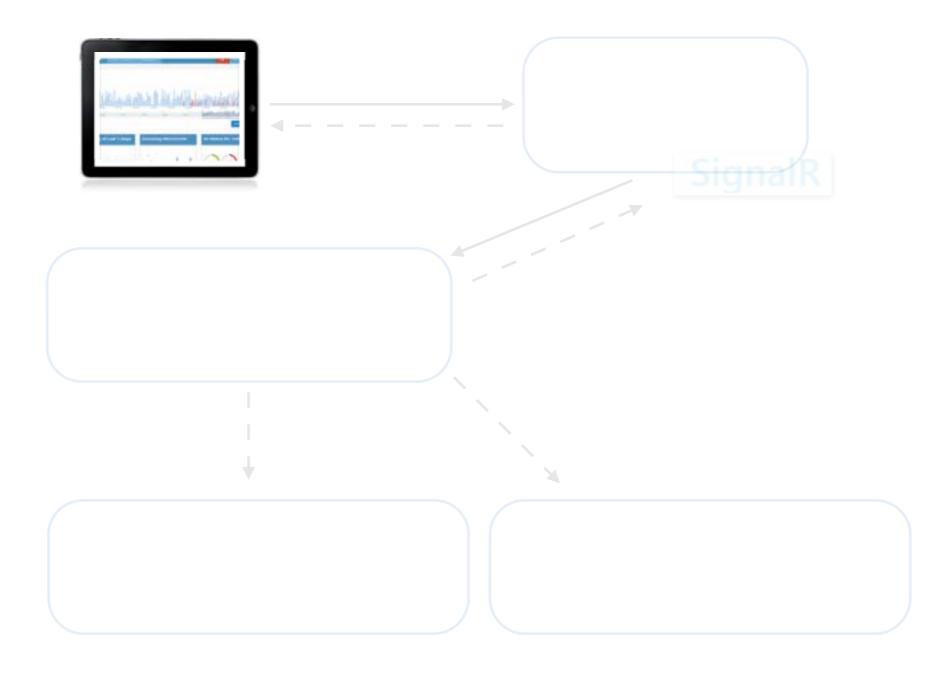

Demo System

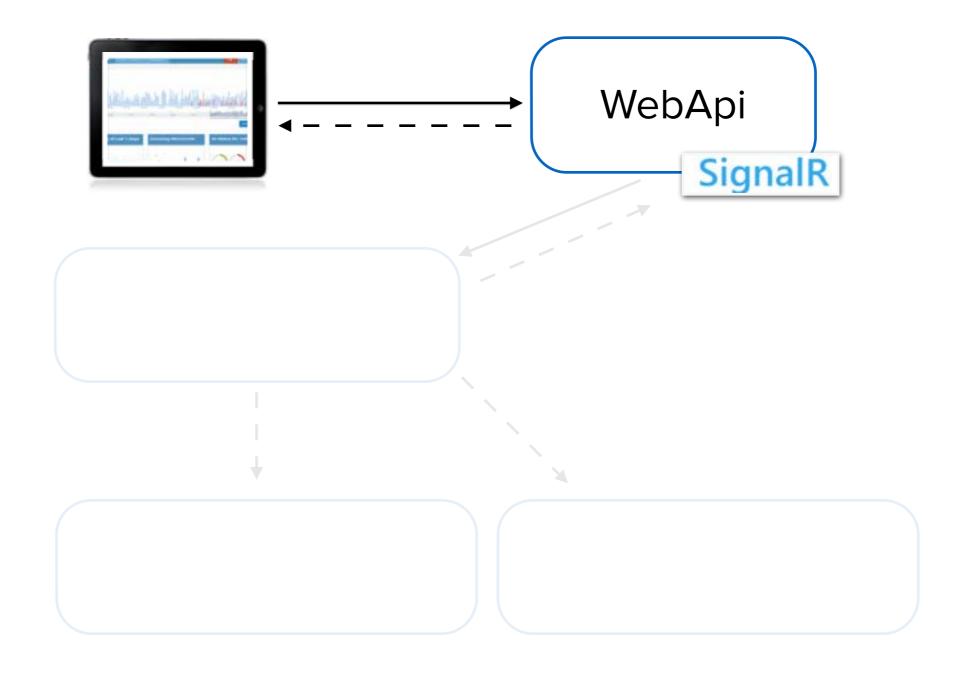

The Web Application

WebApi

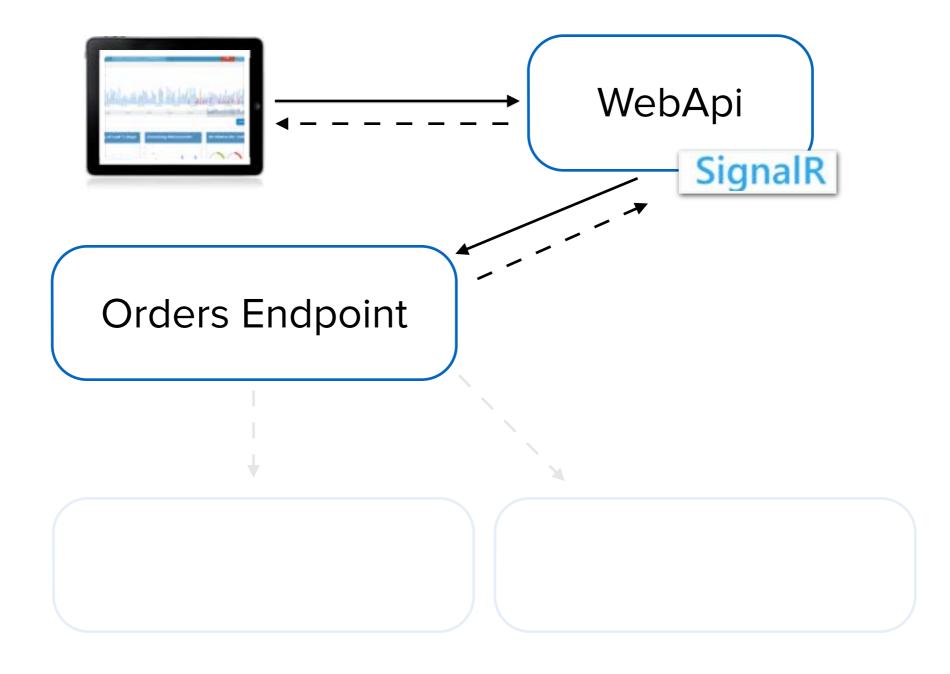

Exposes our backend services to the front end web and mobile applications

Orders Endpoint

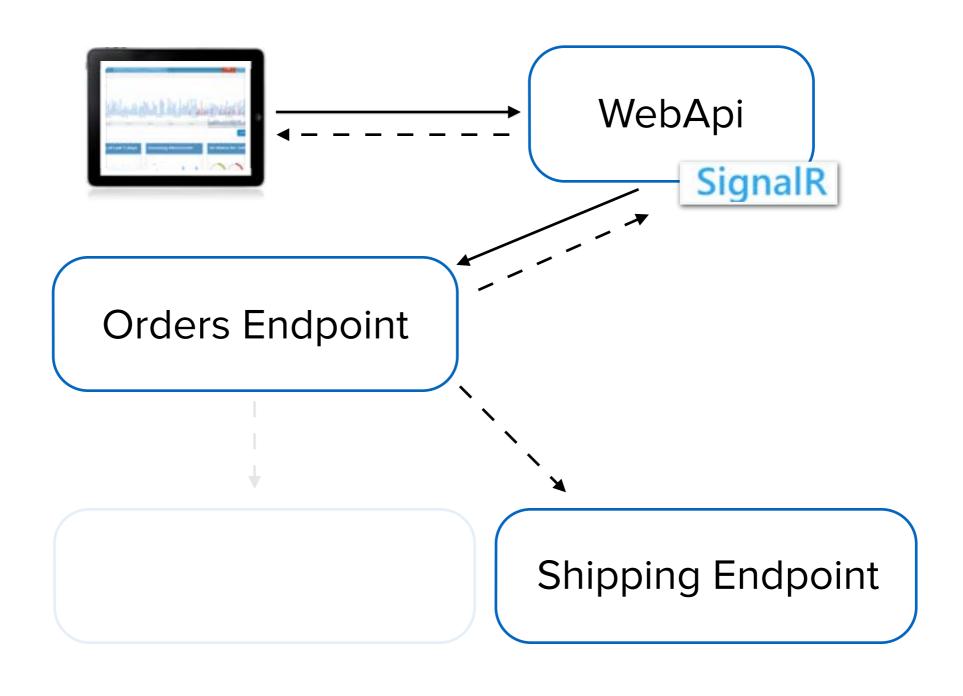

Responsible for placing the order in the database, and processing payment

Shipping Endpoint

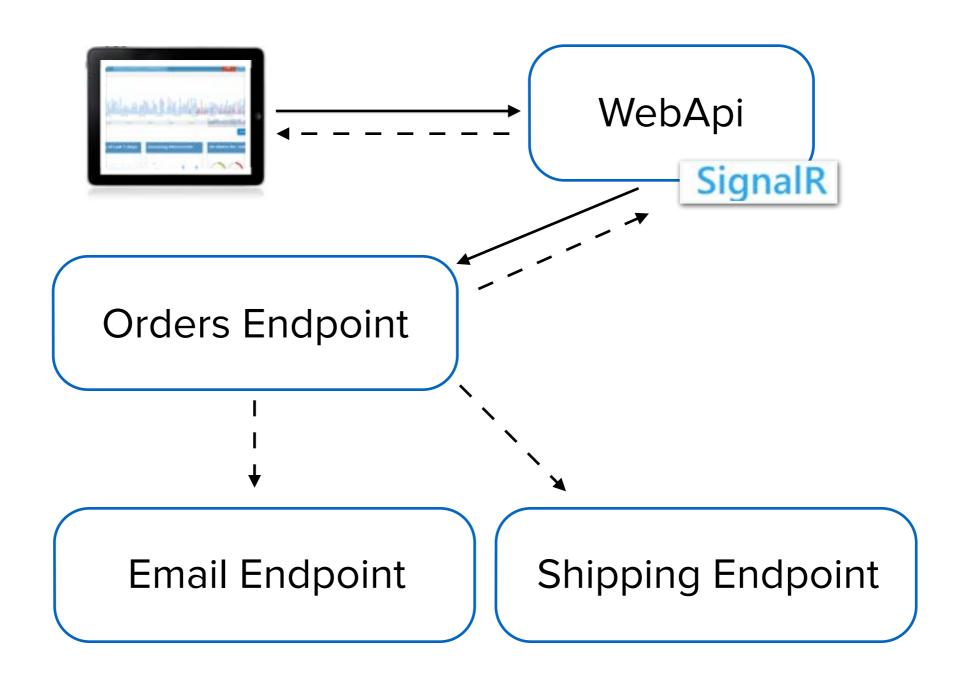

Responsible for scheduling the shipping of the order to the customer

Email Endpoint

Responsible for sending a confirmation and thank you email to the customer after the order has been placed

Demo

Thank You
